

Aim of the course

The aim of the course:

The aim of the course is to enable student to prepare systematically their thesis, to give professional support for them in formulating research questions, in selecting and applying research methodology, and in scientifically correct interpreting of results on the base of the current literature. The aim is to give professional support in using adequate research methods and to help student in one in-depth research of topics already studied in Research Field Practice courses.

Learning outcome, competences

knowledge:

- Students will be familiar with the most current scientific literature related to the studied psychological topic, phenomenon
- Students will have knowledge about different research methodologies, they will be familiar with methods' applicability, with their advantages and limitations.

attitude:

- Students will show sensibility and curiosity to scientific studying of a psychological phenomenon
- Students will be able to think critically about scientific literature, research methods and their own results related to the topic.

skills:

- Students will be able to integrate the most relevant scientific literature related to the studied topic
- Students will be able to form research questions, hypothesis
- Students will be able to study a psychological phenomenon using adequate methods and statistical analysis methods as well
- Students will be able to interpret the results on the base of the most current literature
- Student will be able to evaluate objectively their own work.

Content of the course

Topic of the course

- Aspects of the definition of a research topic: relevancies and background of a topic, possibilities of studying of a scientific questions, possible circumstances of a research, overview of research methods
- Background of the studied phenomenon: looking for relevant sources, articles; aspects of the selection of the most relevant literature. Correct interpretation of the literature.
- Definition of the research questions; aspects related to the content, style of questions and hypothesis
- Literature analysis related to the research methods; aspects of selection and application of different methods
- Definition of a sample, different possibilities of data collection
- Correct elaboration of data and correct and creative, but professional interpretation of results on the base of the most relevant literature
- Aspects of writing discussion; support for making self-reflection related to the own research
- Aspects of presentation of research and results.

Learning activities, learning methods

individual research, consultation

Evaluation of outcomes

Learning requirements, mode of evaluation, criteria of evaluation:

requirements

- participation in the consultation
- performing the tasks

mode of evaluation: qualification

criteria of evaluation:

- participation in the consultation
- level of performing the tasks

Reading list

Compulsory reading list

- The most relevant articles, sources related to the topic of thesis.
- Denzin, N., K.; Lincoln, Y., S. (Eds.) (2011). *The SAGE handbook of qualitative research*. Thousand Oaks: Sage.
- Field, A. (2009): *Discovering Statistics Using SPSS*. Third Edition. London: Sage.
- Flick, U., (ed.) (2014). *The SAGE handbook of qualitative data analysis*. Los Angeles: Sage.
- Kaplan, D. (ed.) (2004). *The SAGE handbook of quantitative methodology for the social sciences*. London: Sage.
- Millsap, R.E.; Maydeu-Olivares, A. (Eds.) (2009). *The SAGE handbook of quantitative methods in psychology*. London: Sage.
